SANA TASNEEM

8309319075 | sanatasneem33@gmail.com | LinkedIn | GitHub

TECHNICAL SKILLS

Languages	Java, Python, C,Javascript, HTML, CSS
Frameworks & Libraries	PyTorch, Pandas, FastAPI, NumPy, Angular, React
Core Concepts	Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP),DBMS
Databases	MySQL, PostgreSQL, SQLite3
Tools & Software	AutoCAD, Git, AWS
Machine Learning & AI	Scikit-learn, CatBoost, LightGBM, HuggingFace Transformers
APIs & Web Scraping	REST APIs, SerpAPI, BeautifulSoup, Requests

PROFESSIONAL EXPERIENCE

Software Engineer Intern | ReadyPod Technologies Pvt. Ltd. | HYD, India | Sep 2025 – Oct 2025
Project: Face Recognition and Authentication System

- Developed an AI-based face recognition and authentication system for secure access control across restricted database center locations.
- Used RetinaFace for face detection and FaceNet for embedding generation to identify and verify registered users.
- Built the authentication pipeline including image preprocessing, embedding extraction, cosine similarity matching, and threshold-based access decisions.
- Created a FastAPI-based web interface to authenticate authorized users, reject unknown individuals, and support multiple faces per image.

EDUCATION

B.E. Computer Science – Muffakham Jah College of Engineering | Hyderabad, India *Nov 2022 - June 2026*
TSBIE INTER – Narayana Junior College | Hyderabad, India *June 2020 - Sep 2022*
CBSE 10th Board – Akshara International School | Hyderabad, India *June 2019 - Apr 2020*

SELECTED PROJECTS

Campus Connect | July-2026

- Built a full-stack campus event platform using FastAPI, PostgreSQL, and Vanilla JavaScript, featuring event discovery, browser notifications, centralized feedback management, and a recommendation system for personalized event suggestions.
- Developed an AI-powered poster processing pipeline using PaddleOCR, OpenCV, and regex-based NLP to automatically extract event details (title, date, time, venue, registration links) from uploaded event posters.
- Implemented secure JWT authentication, admin event management tools, and analytics dashboards, while experimenting with Selenium-based event scraping and Gemini API integration for automated event refinement and sentiment analysis.

Fake News Detection | July-2025

- Built a full-stack verification system using FastAPI and Angular to assess authenticity of user-defined queries.
- Integrated SerpAPI and Gemini 1.5 Flash for live evidence retrieval, structured reasoning, and confidence scoring.
- Designed a robust prompt + response validation layer with JSON-structured outputs and fallback handling to ensure consistent results even with noisy or incomplete user queries.

PubMed Fetch Research Papers | March-2025

- Developed a Python CLI tool using the PubMed API to retrieve and filter biomedical research metadata.
- Implemented author-affiliation analysis to detect pharma/biotech-linked publications automatically.
- Optimized query workflows for faster extraction of relevant papers, abstracts, and journal details.

European Flight Monitoring System | Jan-2025

- Designed a Python-based analytics system to study European flight delay patterns using real-world aviation datasets.
- Built a normalized SQLite database schema and optimized SQL queries to extract delay trends and insights.

Swift Style | Sep - 2024

- Built a CNN-based neural style transfer system using PyTorch to apply artistic styles to images.
- Used pre-trained CNN models for feature extraction and implemented an end-to-end image stylization pipeline.

COURSES

AI Fluency: Framework & Foundations | Anthropic | July 2026

Completed a certification covering foundational AI concepts, responsible AI usage, and practical AI fluency for modern technology workflows.

C Programming | Udemy | Aug 2022 - Sep 2022

Completed a course in C programming covering core concepts such as syntax, control structures, arrays, pointers, and memory management. Developed a strong foundation in procedural programming and efficient code implementation.

DSA Java | Scaler | Aug 2022 - Sep 2022

Completed a comprehensive DSA course focused on core problem-solving techniques using Java. Covered arrays,strings, recursion, sorting, searching, and time complexity analysis through hands-on coding practice.
